CONTENTS

PREFACE **5**
INTRODUCTION **6**

CHAPTER 1. BIOLOGICAL FEATURES OF HUMAN VITAL ACTIVITY. MOLECULAR-CELLULAR LEVEL OF LIFE ORGANIZATION **10**
1.1. Structural levels of living matter organization and their importance for medicine 10
1.2. Non-cellular forms of the organic world. Viruses. Prion proteins 13
1.3. A cell as the structural and functional biological unit 24
1.3.1. Prokaryotic cells 24
1.3.2. Eukaryotic cells. Structural components of cytoplasm 28
1.3.3. Cell nucleus. Chromatin: levels of hereditary apparatus organization. The structure of chromosome 40
1.4. Metabolism of the matter and energy 48
1.5. Molecular level of hereditary information organization in the cell. Nucleic acids 51
1.6. Mechanisms of the genetic information realization in the cell 55
1.6.1. Regulation of gene expression in prokaryotes. The operon theory 59
1.6.2. Eukaryotic gene structure 61
1.7. Reproduction – the basic property of living matter 68
1.7.1. Cell cycle. Mitosis 72
1.7.2. Sexual reproduction. Gametogenesis. Meiosis. Gametes 77
1.7.3. Gametogenesis – the process of gametes (sex cells) formation 80
1.7.4. Cloning of organisms 86

CHAPTER 2. ORGANISM LEVEL OF ORGANIZATION OF THE ALIVE. BASIS OF HUMAN GENETICS **92**
2.1. The subject/tasks of genetics and medical genetics. Key terms of genetics 92
2.2. Basic patterns of inheritance 98
2.2.1. First and second Mendelian laws. Human Mendelian traits 99
2.2.2. Third Mendelian law 100
2.3. Interactions of genes in determination and development of characters (diseases) of organism 103
2.3.1. Forms of allelic gene interactions. Multiple allelism. 104
Inheritance of human blood groups 104
2.3.2. Non-allelic gene interactions 113
2.4. The genetics of sex. Sex-linked inheritance 119
2.5. Theory of linkage and crossing-over 126
2.6. Human organism as a specific object of the genetic studies 134
2.6.1. Methods of human inheritance investigation. Hereditary diseases 134
2.6.2. The principles of genetic conditions diagnosis 155
2.7. Non-chromosomal heredity 162
2.8. Genetic engineering and biotechnology 164
2.9. Immunogenetics and farmacogenetics 167
2.10. Variation in organisms and its forms. Phenotypic and genotypic variation 173
2.11. Genetic risk of environmental pollution. The concept of antimutagenes and comutagenes 182

CHAPTER 3. BIOLOGY OF INDIVIDUAL DEVELOPMENT 185
3.1. Peculiarities of prenatal period of human development..... 185
3.2. Postnatal period of human development..... 192
3.3. Regeneration and transplantation..... 200
3.4. Mechanisms of homeostasis..... 207
3.5. Biological rhythms and homeostasis..... 211

CHAPTER 4. POPULATION-SPECIES LEVEL OF LIFE ORGANIZATION. BIOLOGICAL EVOLUTION 216
4.1. Species, its criteria and structure..... 216
4.2. The main pathways of evolutionary process..... 226
4.3. Regularities of the organic world development. Theories of the origin of life on the Earth..... 227
4.4. Evolution of Vertebrate circulatory and urogenital systems. Onto-phylogenetic causes of congenital defects in humans..... 235

CHAPTER 5. HUMAN ECOLOGY AND BIOSPHERE 249
5.1. Human vital environment..... 252
5.2. Influence of environmental factors on human health..... 257
5.3. Poisonous living organisms and their ecological value..... 263
5.4. Basic laws of ecology..... 283
5.5. Concept of an ecosystem..... 284

CHAPTER 6. MEDICAL PARASITOLOGY 307
6.1. Subregnum *Protozoa*..... 318
6.2. Phylum Flat worms – *Plathelminthes*..... 341
6.3. Phylum Round worms – *Nemathelminthes*..... 370
6.4. Phylum *Arthropoda*..... 392

RECOMMENDED LITERATURE 430

KEY ANSWERS..... 431
